CONCEPTS AND DEFINITIONS

Some important concepts used in this publication are defined as follows:

- 1. Birth:** “birth” means live-birth or still birth.
- 2. Live Birth:** “live birth” means the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which after such expulsion or extraction, breathers or shows any other evidence of life, and each product of such birth is considered live-born.
- 3. Still-Birth:** “still birth” means foetal death where a product of conception has attained at least the prescribed period of gestation.
- 4. Birth Rate:** Birth Rate acts as an index of the relative speed at which additions are being made to the population through child-birth. It is only a live birth that signifies an addition to the existing population, excluding still births.

The annual birth rate is defined as:

$$\text{Birth Rate} = \frac{\text{No. of Births in a year}}{\text{Mid-year Population}} \times 1000$$

- 5. Death Rate:** The death rate for a given year tells us at what rate deaths have depleted the population over the course of the year.
The death rate, which measures the decrease in a population due to deaths, is perhaps the most widely used of any vital statistics rate because of its value as an index in numerous demographic & public health problems.

The Annual Death Rate is defined as:

$$\text{Death Rate} = \frac{\text{No. of Deaths in a Year}}{\text{Mid-year Population}} \times 1000$$

- 6. Infant Mortality Rate:** Infant mortality rate serves as one of the best indices to the general “healthiness” of a society. It is similar to age-specific death rate for infants under 1 year of age.
The annual infant mortality rate is defined as :

$$\text{Infant Mortality Rate} = \frac{\text{No. of deaths under 1 year of age which occurred among the population}}{\text{No. of live births which occurred among the population}} \times 1000$$

7. Maternal Death Rate: Maternal death rate is defined as maternal deaths per thousand live births.

$$\text{Maternal Death Rate} = \frac{\text{No. of Maternal Deaths}}{\text{No. of live births}} \times 1000$$

8. Employed and Unemployed: According to usual status approach, (with a reference period of 365 days) adopted by National Sample Survey Organization (NSSO) a person is considered as working or employed if he/she is engaged relatively for a longer time, during the reference period of last 365 days in any one or more of the work activities. He/she was considered as seeking or available for work or unemployed if he/she was not working but was either seeking or available for work for a relatively longer period of the specified reference period.

9. Own Account Establishment (OAE): OAE is an establishment having no hired worker and is owned and operated with the help of household members only.

10. Labour force Participation Rate: Labour force comprises of employed and unemployed and the number of such persons per 1000 persons in the population constitutes its rate.

11. Unemployment Rate: Unemployment rate refers to number of persons unemployed per 1000 persons in the Labour Force.

12. Employment Rate: Employment rate refers to number of persons employed per 1000 persons in the Labour Force.

13. Main worker: A person who has worked for a major part of the year preceding the date of enumeration, i.e. one who was engaged in any economically productive activity for 183 days or more, i.e. six months or more, in previous year.

14. Marginal worker: A person who has done some work in the year preceding the date of enumeration but does not qualify to be called a 'main worker' i.e. period of work is less than 183 days.

15. Non-worker: A person who has not worked at all in the year preceding the date of enumeration.

16. Total fertility Rate: TFR measures average number of children born to a woman during her entire reproductive period.

17. Gross State Domestic Product: GSDP is a measure in monetary terms of the volume of all goods and services produced by an economy during a given period of time accounted without duplication.

18. Net State Domestic Product:

$$\text{NSDP} = \text{GSDP} - \text{Consumption of fixed capital (depreciation)}$$

19. Dependency Ratio: A measure showing the number of dependents (aged 0-14 and over the age 65) to the total population (aged 15-65). Also referred to as the “total dependency ratio”.

Calculated by:

$$\text{Dependency Ratio} = \frac{\text{No. of Dependents}}{\text{Population (aged 15-64)}} \times 100\%$$

20. Literacy and Education Literate: A person who can read and write in any language is literate. A person who can merely read but cannot write is not literate. It is not necessary that the person should have received any formal education or should have passed any minimum educational standard. All children of age below seven years have been treated as illiterate even though some of them may be attending schools and may be able to read and write a few words.

21. Literacy rate: Literacy rate of the population is defined as the percentage of literates in the age group of seven years and above. For different age groups the percentage of literates in that age group gives the literacy rate.

22. Gross Enrolment Ratio: Gross Enrolment ratio measures what percentage of the total population in the relevant age-group is being covered by the various educational programmes being run in the country, i.e.

$$\text{Gross Enrolment Ratio at stage I} = \frac{\text{Enrolment at stage I}}{\text{Population in the age group Corresponding to the I stage}} \times 100$$

Two stages are: primary (Classes I-V) and middle (Classes VI-VIII).

The corresponding age-group for these stages are 6-10 years and 11-13 years respectively. Therefore, gross enrolment ratio for primary stage (I-V) is

$$\text{Gross Enrolment Ratio for primary stage (I-V)} = \frac{\text{Total Enrolment in Classes I-V}}{\text{Total Population in the age group 6-11 years}} \times 100$$

While interpreting these figures it should be noted that there may be many students outside the age group 6-11 enrolled in classes' I-V. Therefore, enrolment ratios in some age groups can be more than 100.

23. Dropout rate: Dropout at primary stage during a given year is defined as the ratio of the difference of enrolment in class I in the fourth year preceding and the enrolment in class V during the year to the enrolment in the class I in the fourth year preceding. In mathematical terms, these rates for primary (I-V), middle (I-VIII) and secondary (I-X) stages are explained below:

$$\begin{array}{l} \text{Drop out rates at} \\ \text{Primary stage} \\ \text{during 1991-92} \end{array} = \frac{\begin{array}{l} \text{Enrolment in class I preceding four year (i.e. 1987-88)} \\ \text{minus Enrolment in class V during the year (1991-92)} \end{array}}{\text{Enrolment in class I preceding four year (i.e. 1987-88)}} \times 100$$

$$\begin{array}{l} \text{Drop out rates at} \\ \text{Middle stage} \\ \text{during 1991-92} \end{array} = \frac{\begin{array}{l} \text{Enrolment in class I preceding 7 years (i.e. 1984-85)} \\ \text{minus Enrolment in class VIII during the year (1991-92)} \end{array}}{\text{Enrolment in class I preceding 7 year (i.e. 1984-85)}} \times 100$$

$$\begin{array}{l} \text{Drop out rates at} \\ \text{Secondary stage} \\ \text{during 1991-92} \end{array} = \frac{\begin{array}{l} \text{Enrolment in class I preceding 9 years (i.e. 1982-83)} \\ \text{minus Enrolment in class X during the year (1991-92)} \end{array}}{\text{Enrolment in class I preceding 9 year (i.e. 1982-83)}} \times 100$$

24. Trade: refers to the act or process of buying, selling, or exchanging commodities, at either wholesale or retail, within a country or between states.

25. Commerce is the whole system of an economy that constitutes an environment for business. This is in contrast with business, the value-creating activities of an organization for profit. The system includes legal, economic, political, social, cultural, and technological systems that are in operation in any country. Thus, commerce is a system or an environment that affects the business prospects of an economy or a nation-state. We can also define it as a second component of business which includes all activities, functions and institutions involved in transferring goods from producers to consumer.

26. Industry is the production of an economic good or service within an economy. Industry is often classified into three sectors: primary or extractive, secondary or manufacturing, and tertiary or services.

Industries can be classified on the basis of raw materials, size and ownership.

- Raw Materials: Industries may be agriculture based, Marine based, Mineral based, Forest based.
- Size: It refers to the amount of capital invested, number of people employed and the volume of production.
- Ownership: Industries can be classified into private sector, state owned or public sector, joint sector and co-operative sector

27. JOINT STOCK COMPANIES

Data regarding Companies are collected under the companies act, 2013 by Ministry of Corporate Affairs, Government of India. This section includes the information about no. of companies and their capital activity wise distribution of newly registered companies. Data is provided by Ministry of Corporate Affairs, Govt. of India.

28. INDUSTRIES & TAX

The data regarding no. of registered factories, their Productive Capital (Fixed and Working), total no. of Employee and their emolument including Gross Value Added (in lakh) is presented in table 9.3 while table 9.4 includes Index number of Industrial Production (General Index, Manufacturing and Electricity).

Information regarding total number of registered dealers under Sales Tax Act/DVAT/GST and Receipts under Sales Tax Act/DVAT/GST is given in Table No. 9.5(A) & 9.5(B) and the source of information is Trade & Taxes Deptt. of GNCTD.

29. ECONOMIC CENSUS

The Fifth Economic Census in respect of NCT of Delhi was conducted under the aegis of Directorate of Economics & Statistics. Economics Census is the complete enumeration of entrepreneurial activities operating in the geographical boundaries of State/ Country at a given point of time to come out with the official count of establishments and their characteristics. fifth & sixth Economic Census briefly includes all types of entrepreneurial activities in the field of agriculture (except crop production and plantation) as well as non- agriculture. Entrepreneurial activities mean, all those economic activities dealing with the production or distribution of goods/services not solely for the purpose of own consumption. The result of 6th Economic Census are shown in table 9.6 and the results regarding unorganized manufacturing activities in Delhi on 51st, 56th, 62nd, 67th, and 73rd NSS Round are shown in table No. 9.9(A) and 9.9(B). This data is provided by Directorate of Economics & Statistics, Govt. of NCT of Delhi.
